

70TH ANNUAL WILDLIFE DISEASE ASSOCIATION CONFERENCE

Since its founding in 1951, members of the **Wildlife Disease Association** have promoted and conducted cutting edge research in the study of wildlife health and conservation. The pandemic caused by COVID-19 has served to emphasize the critical need for a greater understanding of disease impacts at the wildlife, domestic animal, and human interface. Held annually, our international meeting attracts seasoned wildlife and health professionals from around the globe to network and share their knowledge and ideas.

In 2022, we will meet face to face for the first time in two years. We expect that over 350 professionals and students will gather in Madison, WI, July 23-29, 2022 for the **70th Annual International Wildlife Disease Association Meeting**. Please join us and consider a sponsorship to support wildlife health and conservation.
